IN THE CLAIMS

Please amend the Claims as follows:

1. (Currently Amended) A method for dynamically managing content provided to a mobile device, said method comprising the steps of:

a) retrieving information from a network wherein said network comprises the Internet and wherein said information is associated with a commerce transaction;

b) dynamically assessing said information by matching said information against a predefined set of application transaction-specific tags to determine a type of application transaction to which said information pertains;

c) selectively filtering said information based only on said information such that desired information is compiled and only transaction specific information is retained; and

d) forwarding said desired information through said network to said mobile device that is remotely located.

2. (Original) The method of Claim 1 for dynamically managing content provided to a mobile device wherein step a) comprises retrieving information from said network wherein said information has not previously been tailored for interaction with a mobile device.

3. (Currently Amended) The method of Claim 1 for dynamically managing content provided to a mobile device wherein step b) comprises determining the an application to which said information corresponds.

3COM-2950.TDC.US.P   Serial No. 09/607,534
Examiner: Vu, V.   Art Unit: 2154

4. (Original) The method of Claim 1 for dynamically managing content provided to a mobile device wherein step b) comprises determining if said information contains ~~an application~~ a transaction-specific tag.

5. (Currently Amended) The method of Claim 4 for dynamically managing content provided to a mobile device wherein step c) comprises selectively filtering said information such that said desired information is compiled by retaining only essential portions of said information which contains said ~~application~~ transaction-specific tag.

6. (Original) The method of Claim 1 for dynamically managing content provided to a mobile device wherein step c) comprises selectively filtering said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

7. (Original) The method of Claim 1 for dynamically managing content provided to a mobile device wherein step d) further comprises, prior to forwarding said desired information to said mobile device, reformatting said desired information based upon characteristics of said mobile device.

8. (Currently Amended) A computer system comprising:

a processor;

an address/data bus coupled to said processor;

a computer readable memory coupled to communicate with said processor, said processor for performing the dynamic content management steps of:

3COM-2950.TDC.US.P   Serial No. 09/607,534
Examiner: Vu, V.   Art Unit: 2154

3

a) retrieving information from a network wherein said network comprises the Internet and wherein said information is associated with a commerce transaction;

b) dynamically assessing said information by matching said information against a predefined set of ~~application~~ transaction-specific tags to determine a type of ~~application~~ transaction to which said information pertains;

c) selectively filtering said information based only on said filtering such that desired information is compiled and only transaction specific information is retained; and

d) forwarding said desired information through said network to a mobile device that is remotely located.

9.   (Original) The computer system as recited in Claim 8 wherein step a) of said dynamic content management steps performed by said processor further comprises retrieving information from said network wherein said information has not previously been tailored for interaction with a mobile device.

10.   (Currently Amended) The computer system as recited in Claim 8 wherein step b) of said dynamic content management steps performed by said processor further comprises determining ~~the~~ an application to which said information corresponds.

11.   (Currently Amended) The computer system as recited in Claim 8 wherein step b) of said dynamic content management steps performed by said processor further comprises determining if said information contains ~~an~~ ~~application~~ a transaction-specific tag.

12. (Currently Amended) The computer system as recited in Claim 11 wherein step b) of said dynamic content management steps performed by said processor further comprises selectively filtering said information such that said desired information is compiled by retaining only essential portions of said information which contains said ~~application~~ transaction-specific tag.

13. (Original) The computer system as recited in Claim 8 wherein step c) of said dynamic content management steps performed by said processor further comprises selectively filtering said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

14. (Original) The computer system as recited in Claim 8 wherein step d) of said dynamic content management steps performed by said processor further comprises, prior to forwarding said desired information to said mobile device, reformatting said desired information based upon characteristics of said mobile device.

15. (Currently Amended) A computer-usable medium having computer-readable program code embodied therein for causing a computer to perform the dynamic content management steps of:

a) retrieving information from a network wherein said network comprises the Internet and wherein said information is associated with a commerce transaction;

b) dynamically assessing said information by matching said information against a predefined set of ~~application~~ transaction-specific tags to determine a type of ~~application~~ transaction to which said information pertains;

c) selectively filtering said information based only on said information such that desired information is compiled; and

d) forwarding said desired information through said network to a mobile device that is remotely located.

16. (Original) The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step a) to retrieve said information from said network wherein said information has not previously been tailored for interaction with a mobile device.

17. (Currently Amended) The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step b) to determine ~~the~~ an application to which said information corresponds.

18. (Currently Amended) The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step b) to determine if said information contains ~~an application~~ a transaction-specific tag.

19. (Currently Amended) The computer-usable medium as recited in Claim 18, wherein said computer-usable medium further causes said computer performing step b) to selectively filter said information such that said desired

information is compiled by retaining only essential portions of said information which contains said ~~application~~ <u>transaction</u>-specific tag.

20. (Original) The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step c) to selectively filter said information such that said desired information is compiled by subjecting said information to a text filter, an image filter, and an image transcoder.

21. (Original) The computer-usable medium as recited in Claim 15, wherein said computer-usable medium further causes said computer performing step d) to reformat said desired information based upon characteristics of said mobile device prior to forwarding said desired information to said mobile device.
